RUBEK

AUTOMATIC DOORS

Established 1994

“The first choice in Automatic Door Control”

We sincerely appreciate your on-going support for our RUBEK brand of automatic door operators and would like to take this opportunity to say thank you.

“RUBEK INDUSTRIES turns 15!”

Now may be a good time for all aluminium fabricators, architects and builders to source locally manufactured and owned products and in doing so, keep the dollars in WA.

So, if you're not already, take action today by supporting and strengthening our WA economy by recommending and buying locally made products and keep the imports out.

We are pleased to announce a new milestone for RUBEK Automatic Doors. We have just turned 15 in March this year.

That amounts to 15 years of product development in every operator leaving our factory!

We believe the main reason for RUBEK's success is the enormous support received from all our clients over the years, from aluminium fabricators, architects, builders, end users and developers alike. We are still the only locally made and owned automatic sliding door operator manufacturer right here in Western Australia.

This is a philosophy that we have stood by consistently in our efforts to give back and add value to Western Australia and our local communities.

Manufactured and owned in WA
Local support statewide
Fully compliant with BSA and AS5007
Environmental and user friendly—BUILT TO LAST

It's service and support that set's us apart !

Our aim is to build a reliable product which is end user and service technician friendly. This philosophy has resulted in numerous installations throughout WA as more and more clients become aware of the Rubek "Open Protocol System".

This demonstrated success proves we have developed a reliable product that keeps maintenance costs low for our customers and ourselves. We believe over the years we have achieved a well refined product that does satisfy a basic, but extremely important balance allowing us to invest more time and money into future product development.

All Rubek electronics are designed and developed in WA.

Every automatic door operator we supply and commission comes with 15 years of development expertise built in.

We recognise that it's our backup service and future support which are key reasons why our customers continue to work with us from one project to the next.

"More and more clients become aware of the Rubek 'Open Protocol System'..."

That's it, in a nutshell. All mechanical devices with moving parts will wear over time and automatic doors are no exception. We understand that customers want reliability, but that they also accept that sensible maintenance is part of the package when a door is installed (refer to the service schedule included on the back page).

Preventative maintenance.

Perhaps the most important aspect of installing an automatic door system is the backup support offered by the manufacturer, such as Rubek service and support. As a quality manufacturer we will work with you to create peace of mind and assurance that these door systems will work reliably, long term.

"A first class product with first class service all from a locally owned and operated company."

Upgrade packages.

Packages from Rubek Service and Support are available which can upgrade your existing auto-

mated entrance system for a fraction of the price of purchasing a completely new one. This can also apply to some non-Rubek branded products. Technicians can visit the site and replace essential parts, while leaving other original mechanical parts in place. You can also upgrade sensors on older model doors of any type by refitting them with the most advanced safety equipment. This ensures that the older doors are safe and reliable.

Once in our system we offer a tracking service as well. This means that we can provide up-to-date reports for all our door operators and the components in them, so if you have any questions these reports will let you know exactly what services were completed, when, and what work was carried out.

Getting a good Rubek service and support plan for your new or old automatic entry is as important as the door itself. Not only does having a plan increase the life of your door, but also helps with budget planning and safety. Do not go without it!
